

you can put a `@@@keep-lines` region inside a `@@@single-column` region as done here:

Here are some formulas: `u-cjk/4e36` 、 ●

`u-cjk/4e37` ヹ ●、ノ

`u-cjk/4e38` 丸 ⑨九、

`u-cjk/4e39` 丹 ⑩門●、一

`u-cjk/4e3a` 为 ⑪、●力、

`u-cjk/4e3b` 主 ●、王

`u-cjk/4e3b` 主 ●ㄣ土

`u-cjk/4e3c` 井 ●井、

`u-cjk-xb/250b7` 𪚩 ●●告巨皿

`u-cjk-xb/250b8` 𪚪 ●楊皿

At this point, a line consisting of a triple at-sign `@@@` indicates the end of the `keep-lines` region; since the `single-column` region is still active, however, this paragraph runs across the entire width of the documents text area.
