

## MKTS Regions 中國皇帝

To indicate the start of an MKTS-MD Region, place a triple at-sign @@@ at the start of a line, immediately followed by a command name such as `keep-lines` or `single-column`. The end of a region is indicated by a triple at-sign without a com-

mand name. Nested regions are possible; for example, you can put a `@@@keep-lines` region inside a `@@@single-column` region as done here.

At this point, a line consisting of a triple at-sign @@@ indicates the end of the `keep-lines` region; since the `single-column` region is still active, however, *this paragraph runs across the entire width* of the documents text area.

Now a `}single-column` MKTS/MD event has been encountered that was triggered by a triple-at command in the manuscript; accordingly, typesetting is reverted back to multi-

column mode, which is why you can see this paragraph set in two columns.
