## [h2] {multi-column}

# MKTS Regions 中國皇帝{multi-column}

To indicate the start of an MKTS-MD Region, place a triple at-sign (code) {multi-column}@@@{multi-column} at the start of a line, immediately followed by a command name such as (code) {multi-column}keep-lines{multi-column} or (code) {multi-column}single-column{multi-column}. The end of a region is indicated by a triple at-sign without a

command name. Nested regions are possible; for example, you can put a (code) {multi-column}@@@keep-lines{multi-column} region inside a (code) {multi-column}@@@single-column{multi-column} region as done here.

                                                                                                                                                                               {multi-column}
                                                                                                                                                                                                                         {single-
(code) {keep-lines} {multi-column} {single-column}u-cjk-xb/250b8{keep-lines}
                                                                                                                                                                               {multi-column}
                                                                                                                                                                                                                         {single-
{multi-column} {single-column}At this point, a line consisting of a triple at-sign (code) {multi-column} {single-
column)@@@{multi-column} {single-column} indicates the end of the (code) {multi-column} {single-column}keep-
lines{multi-column}
                                                          {single-column} region; since the (code) {multi-column} {single-column}single-
column{multi-column} {single-column} region is still active, however, (em) {multi-column} {single-column} this
paragraph runs across the entire width [multi-column] [single-column] of the documents text area. [multi-column]
```

Now a (code) {multi-column}}single-column{multi-column} MKTS/MD event has been encountered that was triggered by a triple-at command in the manuscript; accord-

ingly, typesetting is reverted back to multi-column mode, which is why you can see this paragraph set in two columns.
